Project Name	Opti Crop : Smart Agricultural Production Optimization Engine
Maximum marks	4 marks

Empathy map:An empathy map was created to understand the needs, challenges, thoughts, and experiences of farmers while selecting suitable crops. This helps the development team build a user-centric crop

recommendation system that provides accurate, data-driven suggestions based on soil nutrients and environmental conditions.

SAYS - I want to grow the most suitable crop for my land. - I need accurate recommendations based on my soil and weather conditions. - I want to reduce farming risks and improve productivity.	THINKS - Which crop will give me the highest yield? - Will my soil nutrients support the selected crop? - How can I make better farming decisions using technology?
PERSONA NAME Farmer	

DOES - Tests soil for nutrient levels. - Collects weather and rainfall information. - Uses the application to enter soil and climate details and view crop recommendations.	FEELS - Worried about crop failure and financial loss. - Confused by changing environmental conditions. - Hopeful that technology can improve farming
